

1 AN ACT concerning State government.

2 **Be it enacted by the People of the State of Illinois,**  
3 **represented in the General Assembly:**

4 Section 1. Short title. This Act may be cited as the Task  
5 Force on Infant and Maternal Mortality Among African Americans  
6 Act.

7 Section 5. Findings. Based upon an April 11, 2018 New York  
8 Times article on "Why America's Black Mothers and Babies Are in  
9 a Life-or-Death Crisis", the General Assembly finds the  
10 following:

11 (1) From 1915 through the 1990s, amid vast improvements  
12 in hygiene, nutrition, living conditions and health care,  
13 the number of babies of all races who died in the first  
14 year of life dropped by over 90% – a decrease unparalleled  
15 by reductions in other causes of death. But that national  
16 decline in infant mortality has since slowed. In 1960, the  
17 United States was ranked 12th among developed countries in  
18 infant mortality. Since then, with its rate largely driven  
19 by the deaths of black babies, the United States has fallen  
20 behind and now ranks 32nd out of the 35 wealthiest nations.  
21 Low birth weight is a key factor in infant death, and a new  
22 report released in March by the Robert Wood Johnson  
23 Foundation and the University of Wisconsin suggests that

1 the number of low-birth-weight babies born in the United  
2 States – also driven by the data for black babies – has  
3 inched up for the first time in a decade.

4 (2) Black infants in America are now more than twice as  
5 likely to die as white infants – 11.3 per 1,000 black  
6 babies, compared with 4.9 per 1,000 white babies, according  
7 to the most recent government data – a racial disparity  
8 that is actually wider than in 1850, 15 years before the  
9 end of slavery, when most black women were considered  
10 chattel. In one year, that racial gap adds up to more than  
11 4,000 lost black babies. Education and income offer little  
12 protection. In fact, a black woman with an advanced degree  
13 is more likely to lose her baby than a white woman with  
14 less than an eighth-grade education.

15 (3) This tragedy of black infant mortality is  
16 intimately intertwined with another tragedy: a crisis of  
17 death and near death in black mothers themselves. The  
18 United States is one of only 13 countries in the world  
19 where the rate of maternal mortality – the death of a woman  
20 related to pregnancy or childbirth up to a year after the  
21 end of pregnancy – is now worse than it was 25 years ago.  
22 Each year, an estimated 700 to 900 maternal deaths occur in  
23 the United States. In addition, the Centers for Disease  
24 Control and Prevention reports more than 50,000  
25 potentially preventable near-deaths per year – a number  
26 that rose nearly 200% from 1993 to 2014, the last year for

1           which statistics are available. Black women are 3 to 4  
2           times as likely to die from pregnancy-related causes as  
3           their white counterparts, according to the Centers for  
4           Disease Control and Prevention – a disproportionate rate  
5           that is higher than that of Mexico, where nearly half the  
6           population lives in poverty – and as with infants, the high  
7           numbers for black women drive the national numbers.

8           (4) In her 2014 testimony before the United Nations  
9           Committee on the Elimination of Racial Discrimination,  
10          Monica Simpson, the Executive Director of SisterSong, the  
11          country's largest organization dedicated to reproductive  
12          justice for women of color, testified that the United  
13          States, by failing to address the crisis in black maternal  
14          mortality, was violating an international human rights  
15          treaty. Following this testimony, the committee called on  
16          the United States to "eliminate racial disparities in the  
17          field of sexual and reproductive health and standardize the  
18          data-collection system on maternal and infant deaths in all  
19          states to effectively identify and address the causes of  
20          disparities in maternal and infant-mortality rates". No  
21          such measures have been forthcoming. Only about half the  
22          states and a few cities maintain maternal-mortality review  
23          boards to analyze individual cases of pregnancy-related  
24          deaths. There has not been an official federal count of  
25          deaths related to pregnancy in more than 10 years. An  
26          effort to standardize the national count has been financed

1 in part by contributions from Merck for Mothers, a program  
2 of the pharmaceutical company, to the CDC Foundation.

3 (5) The crisis of maternal death and near-death also  
4 persists for black women across class lines.

5 (6) The reasons for the black-white divide in both  
6 infant and maternal mortality have been debated by  
7 researchers and doctors for more than 2 decades. But  
8 recently there has been growing acceptance of what has  
9 largely been, for the medical establishment, a shocking  
10 idea: for black women in America, an inescapable atmosphere  
11 of societal and systemic racism can create a kind of toxic  
12 physiological stress, resulting in conditions – including  
13 hypertension and pre-eclampsia – that lead directly to  
14 higher rates of infant and maternal death. And that  
15 societal racism is further expressed in a pervasive,  
16 longstanding racial bias in health care – including the  
17 dismissal of legitimate concerns and symptoms – that can  
18 help explain poor birth outcomes even in the case of black  
19 women with the most advantages.

20 (7) Science has refuted the theory that high rates of  
21 infant death in American black women has a genetic  
22 component. A 1997 study published by 2 Chicago  
23 neonatologists, Richard David and James Collins, in The New  
24 England Journal of Medicine found that babies born to new  
25 immigrants from impoverished West African nations weighed  
26 more than their black American-born counterparts and were

1 similar in size to white babies, and were more likely to be  
2 born full term, which lowers the risk of death. In 2002,  
3 the same researchers further found that the daughters of  
4 African and Caribbean immigrants who grew up in the United  
5 States went on to have babies who were smaller than their  
6 mothers had been at birth, while the grandchildren of white  
7 European women actually weighed more than their mothers had  
8 at birth. It took just one generation for the American  
9 black-white disparity to manifest.

10 (8) Though it seemed radical 25 years ago, few in the  
11 field now dispute that the black-white disparity in the  
12 deaths of babies is related not to the genetics of race but  
13 to the lived experience of race in this country. In 2007,  
14 Richard David and James Collins published an even more  
15 thorough examination of race and infant mortality in the  
16 American Journal of Public Health, again dispelling the  
17 notion of some sort of gene that would predispose black  
18 women to preterm birth or low birth weight. Based upon his  
19 years of research and study on the subject, David, a  
20 professor of pediatrics at the University of  
21 Illinois-Chicago, stated that for "black women...something  
22 about growing up in America seems to be bad for your baby's  
23 birth weight".

24 (9) People of color, particularly black people, are  
25 treated differently the moment they enter the health care  
26 system. In 2002, the groundbreaking report "Unequal

1 Treatment: Confronting Racial and Ethnic Disparities in  
2 Health Care", published by a division of the National  
3 Academy of Sciences, took an exhaustive plunge into 100  
4 previous studies, careful to decouple class from race, by  
5 comparing subjects with similar income and insurance  
6 coverage. The researchers found that people of color were  
7 less likely to be given appropriate medications for heart  
8 disease, or to undergo coronary bypass surgery, and  
9 received kidney dialysis and transplants less frequently  
10 than white people, which resulted in higher death rates.  
11 Black people were 3.6 times as likely as white people to  
12 have their legs and feet amputated as a result of diabetes,  
13 even when all other factors were equal. One study analyzed  
14 in the report found that cesarean sections were 40% more  
15 likely among black women compared with white women.

16 (10) In 2016, a study by researchers at the University  
17 of Virginia examined why African-American patients receive  
18 inadequate treatment for pain not only compared with white  
19 patients but also relative to World Health Organization  
20 guidelines. The study found that white medical students and  
21 residents often believed incorrect and sometimes  
22 "fantastical" biological fallacies about racial  
23 differences in patients. For example, many thought,  
24 falsely, that blacks have less-sensitive nerve endings  
25 than whites, that black people's blood coagulates more  
26 quickly and that black skin is thicker than white. For

1           these assumptions, researchers blamed not individual  
2           prejudice but deeply ingrained unconscious stereotypes  
3           about people of color, as well as physicians' difficulty in  
4           empathizing with patients whose experiences differ from  
5           their own. In specific research regarding childbirth, the  
6           Listening to Mothers Survey III found that one in five  
7           black and Hispanic women reported poor treatment from  
8           hospital staff because of race, ethnicity, cultural  
9           background or language, compared with 8% of white mothers.

10           (11) Researchers have worked to connect the dots  
11           between racial bias and unequal treatment in the health  
12           care system and maternal and infant mortality; however,  
13           based upon the preceding findings, it is clear that more  
14           must be done, and the General Assembly finds that a Task  
15           Force is necessary to work to establish best practices to  
16           decrease infant and maternal mortality among African  
17           Americans in Illinois.

18           Section 10. Task Force on Infant and Maternal Mortality  
19           Among African Americans.

20           (a) There is hereby created the Task Force on Infant and  
21           Maternal Mortality Among African Americans to work to establish  
22           best practices to decrease infant and maternal mortality among  
23           African Americans in Illinois.

24           (b) The Task Force shall consist of the following members:

25           (1) the Director of Public Health, or his or her

1           designee;

2           (2) the Director of Healthcare and Family Services, or  
3           his or her designee;

4           (3) the Secretary of Human Services, or his or her  
5           designee;

6           (4) two medical providers who focus on infant and  
7           community health appointed by the Director of Public  
8           Health;

9           (5) two obstetrics and gynecology (OB-GYN) specialists  
10          appointed by the Director of Public Health;

11          (6) two doulas appointed by the Director of Public  
12          Health. For the purposes of this paragraph (6), "doula"  
13          means a professional trained in childbirth who provides  
14          emotional, physical, and educational support to a mother  
15          who is expecting, is experiencing labor, or has recently  
16          given birth;

17          (7) two nurses appointed by the Director of Public  
18          Health;

19          (8) two certified nurse midwives appointed by the  
20          Director of Public Health;

21          (9) four community experts on maternal and infant  
22          health appointed by the Director of Public Health;

23          (10) one representative from hospital leadership  
24          appointed by the Director of Public Health;

25          (11) one representative from a health insurance  
26          company appointed by the Director of Public Health;

1           (12) one African American woman of childbearing age who  
2           has experienced a traumatic pregnancy, which may or may not  
3           have included the loss of a child, appointed by the  
4           Director of Public Health;

5           (13) one physician representing the Illinois Academy  
6           of Family Physicians; and

7           (14) one physician representing the Illinois Chapter  
8           of the American Academy of Pediatrics.

9           (c) The Task Force shall elect a chairperson from among its  
10          membership and any other officer it deems appropriate. The  
11          Department of Public Health shall provide technical support and  
12          assistance to the Task Force and shall be responsible for  
13          administering its operations and ensuring that the  
14          requirements of this Act are met.

15          (d) The members of the Task Force shall receive no  
16          compensation for their services as members of the Task Force.

17          Section 15. Meetings; duties.

18          (a) The Task Force shall meet at least once per quarter  
19          beginning as soon as practicable after the effective date of  
20          this Act.

21          (b) The Task Force shall:

22                 (1) review research that substantiates the connections  
23                 between a mother's health before, during, and between  
24                 pregnancies, as well as that of her child across the life  
25                 course;

1           (2) review comprehensive, nationwide data collection  
2           on maternal deaths and complications, including data  
3           disaggregated by race, geography, and socioeconomic  
4           status;

5           (3) review the data sets that include information on  
6           social and environmental risk factors for women and infants  
7           of color;

8           (4) review better assessments and analysis on the  
9           impact of overt and covert racism on toxic stress and  
10          pregnancy-related outcomes for women and infants of color;

11          (5) review research to identify best practices and  
12          effective interventions for improving the quality and  
13          safety of maternity care;

14          (6) review research to identify best practices and  
15          effective interventions, as well as health outcomes before  
16          and during pregnancy, in order to address pre-disease  
17          pathways of adverse maternal and infant health;

18          (7) review research to identify effective  
19          interventions for addressing social determinants of health  
20          disparities in maternal and infant health outcomes; and

21          (8) produce an annual report detailing the Task Force's  
22          findings based upon its review of research conducted under  
23          this Section, including specific recommendations, if any,  
24          and any other information the Task Force may deem proper in  
25          furtherance of its duties under this Act.

1           Section 20. Report. Beginning December 1, 2020, and for  
2 each year thereafter, the Task Force shall submit a report of  
3 its findings and recommendations to the General Assembly. The  
4 report to the General Assembly shall be filed with the Clerk of  
5 the House of Representatives and the Secretary of the Senate in  
6 electronic form only, in the manner that the Clerk and the  
7 Secretary shall direct.

8           Section 99. Effective date. This Act takes effect upon  
9 becoming law.
