1 AMENDMENT TO SENATE BILL 1041

2 AMENDMENT NO. \_\_\_\_\_. Amend Senate Bill 1041 by replacing  
3 everything after the enacting clause with the following:

4 "Section 1. Short title. This Act may be cited as the  
5 Consumer Choice in Maternal Care for African-American Mothers  
6 Program Act.

7 Section 5. Findings. The General Assembly finds the  
8 following:

9 (1) In its 2018 Illinois Maternal Morbidity and  
10 Mortality Report, the Department of Public Health reported  
11 that Black women were 6 times as likely to die from a  
12 pregnancy-related condition as white women, and that in  
13 Illinois, 72% of pregnancy-related deaths and 93% of  
14 violent pregnancy-associated deaths were deemed  
15 preventable.

16 (2) The Department of Public Health also found that

1           between 2016 and 2017, Black women had the highest rate of  
2           severe maternal morbidity with a rate of 101.5 per 10,000  
3           deliveries, which is almost 3 times as high as the rate for  
4           white women.

5           (3) In 2019, the Chicago Department of Public Health  
6           released a data report on Maternal Morbidity and Mortality  
7           in Chicago and found that "(w)omen for whom Medicaid was  
8           the delivery payment source are significantly more likely  
9           than those who used private insurance to experience severe  
10          maternal morbidity." The Chicago Department of Public  
11          Health identified zip codes within the city that had the  
12          highest rates of severe maternal morbidity in 2016 and  
13          2017 (100.4-172.8 per 10,000 deliveries). These zip codes  
14          included: 60653, 60637, 60649, 60621, 60612, 60624, and  
15          60644. All of the zip codes were identified as  
16          experiencing high economic hardship. According to the  
17          Chicago Department of Public Health "(c)hronic diseases,  
18          including obesity, hypertension, and diabetes can increase  
19          the risk of a woman experiencing adverse outcomes during  
20          pregnancy." However, "there were no significant  
21          differences in pre-pregnancy BMI, hypertension, and  
22          diabetes between women who experienced a  
23          pregnancy-associated death and all women who delivered  
24          babies in Chicago."

25          (4) In a national representative survey sample of  
26          mothers who gave birth in an American hospital in 2011 and

1 2012, 1 out of 4 mothers who identified as Black or  
2 African-American expressed that they would "definitely  
3 want" to have a future birth at home, compared to 8.4% of  
4 white mothers. Black mothers express a demand for planned  
5 home birth services at almost 3 times the rate of white  
6 mothers. Yet, in the United States, non-Hispanic white  
7 women who can afford to pay out-of-pocket for their labor  
8 and delivery costs access planned home birth care at the  
9 greatest rate. Similarly, an analysis of birth certificate  
10 data from the Centers for Disease Control and Prevention  
11 for the years 2016 through 2019 shows that non-Hispanic  
12 white mothers are 7 times more likely than non-Hispanic  
13 Black mothers to experience a planned home birth.

14 (5) According to calculations based on birth  
15 certificate data from July 2019 in Cook County, there  
16 would have to be 7 Black or African-American certified  
17 professional midwives working in Cook County in order for  
18 just 1% of Black mothers in Cook County to have access to  
19 racially concordant midwifery care in a given month.

20 (6) For birthing persons of sufficient health who  
21 desire to give birth outside of an institutional setting  
22 without the assistance of epidural analgesia, planned home  
23 birth under the care of a certified professional midwife  
24 can be a dignifying and safe, evidence-based choice. In  
25 contrast, regulatory impingement on Black families'  
26 ability to access that choice does not serve to enhance

1 maternal or neonatal safety, but instead reifies the  
2 institutionalization of Black bodies by the State.

3 (7) In order to make safe, planned home births  
4 accessible to Black families in Illinois, the State must  
5 require Medicaid provider networks to include certified  
6 professional midwives. According to natality data from the  
7 Centers for Disease Control and Prevention, every year  
8 from 2016 through 2019, 2 out of every 3 live births to  
9 Black or African-American mothers living in Cook County  
10 utilized Medicaid as the source of payment for delivery.  
11 According to that same data, Medicaid paid for over 14,000  
12 deliveries to Black or African-American mothers residing  
13 in Cook County during the year 2019 alone.

14 (8) A population-level, retrospective cohort study  
15 published in 2018 that used province-wide maternity,  
16 medical billing, and demographic data from British  
17 Columbia, Canada concluded that antenatal midwifery care  
18 in British Columbia was associated with lower odds of  
19 small-for-gestational-age birth, preterm birth, and low  
20 birth weight for women of low socioeconomic position  
21 compared with physician models of care. Results support  
22 the development of policy to ensure antenatal midwifery  
23 care is available and accessible for women of low  
24 socioeconomic position.

25 (9) In its January 2018 report to the General  
26 Assembly, the Department of Healthcare and Family Services

1 reported that its infant and maternal care expenditures in  
2 calendar year 2015 totaled \$1,410,000,000. The Department  
3 of Healthcare and Family Services said, "(t)he majority of  
4 HFS birth costs are for births with poor outcomes. Costs  
5 for Medicaid covered births are increasing annually while  
6 the number of covered births is decreasing for the same  
7 period". The Department of Healthcare and Family Services'  
8 expenditures average \$12,000 per birth during calendar  
9 year 2015 for births that did not involve poor outcomes  
10 such as low birth weight, very low birth weight, and  
11 infant mortality. That \$12,000 expenditure covered  
12 prenatal, intrapartum, and postpartum maternal healthcare,  
13 as well as infant care through the first year of life. The  
14 next least expensive category of births averaged an  
15 expenditure of \$40,200. The most expensive category of  
16 births refers to births resulting in very low birth weight  
17 which cost the Department of Healthcare and Family  
18 Services over \$328,000 per birth.

19 (10) Expanding Medicaid coverage to include perinatal  
20 and intrapartum care by certified professional midwives  
21 will not contribute to increased taxpayer burden and, in  
22 fact, will likely decrease the Department of Healthcare  
23 and Family Services' expenditures on maternal care while  
24 improving maternal health outcomes within the Black  
25 community in Illinois.

1           Section 10. Medicaid voucher program. The Task Force on  
2 Infant and Maternal Mortality Among African Americans shall  
3 partner with Holistic Birth Collective to develop rules and  
4 regulations for a Medicaid voucher program to expand consumer  
5 choice for Black mothers that includes planned home birth  
6 services and in-home perinatal and postpartum care services  
7 provided by racially concordant nationally accredited  
8 certified professional midwives who are licensed and  
9 registered in Illinois. On January 1, 2024, and each January 1  
10 thereafter, the Task Force shall submit a report to the  
11 General Assembly that provides a status update on the program  
12 and annual impact measure reporting. The Department of Public  
13 Health, in consultation with the Department of Healthcare and  
14 Family Services, shall implement the program.

15           Section 15. Maternity episode payment model. The program  
16 shall implement a maternity episode payment model that  
17 provides a single payment for all services across the  
18 prenatal, intrapartum, and postnatal period which covers the 9  
19 months of pregnancy plus 12 weeks of postpartum. The core  
20 elements of the maternity care episode payment model shall  
21 include all of the following:

22           (1) Limited exclusion of selected high-cost health  
23 conditions and further adjustments to limit service  
24 provider risk such as risk adjustment and stop loss.

25           (2) Duration from the initial entry into prenatal care

1 through the postpartum and newborn periods.

2 (3) Single payment for all services across the  
3 episode.

4 The Department of Public Health, in consultation with the  
5 Department of Healthcare and Family Services, shall make  
6 available to the Task Force all relevant data related to  
7 maternal care expenditures made under the State's Medical  
8 Assistance Program so that budget-neutral reimbursement rates  
9 can be established for bundled maternal care services spanning  
10 the prenatal, labor and delivery, and postpartum phases of a  
11 maternity episode.

12 Section 99. Effective date. This Act takes effect January  
13 1, 2022.".
